

Java Software Engineer

■ darshangondkar02@gmail.com

Results-driven Java Developer with extensive internship experience in Spring Boot, REST APIs, and Microservices. Proven track record in building scalable backend systems and integrating modern AI technologies like Spring AI and LLMs. Eager to leverage strong full-stack skills and academic excellence to contribute to high-impact software development teams.

Oct 2025 - Present

- Developed scalable backend systems for the "Ambram" e-commerce product from scratch.
- Building user and admin modules with Liquibase for database migration and management.
- Implementing basic frontend features using React.js for product interface.
- Developed a React.js chatbot that automates functional website generation based on user-submitted details.
- Assisting occasionally with 3D model integration using Unity for product display enhancements.

Dec 2025 - Feb 2026

- Developed a high-reliability process monitor backend, leveraging CronJobs to automate complex scheduled tasks and system workflows.
- Developed REST APIs to synchronize database interactions with automated background processes.
- Managed tasks and tracked progress using JIRA tickets, following references for efficient development.
- Ensured security and data integrity by applying JWT-based authentication.
- Collaborated with the team to optimize backend functionality and improve overall system performance.

July 2025 - Dec 2025

- Built backend for a hotel management system, implementing core CRUD functionalities.
- Implemented Microservices service discovery using Eureka, improving system modularity and routing efficiency.
- Applied JWT authentication for secure API access.
- Assisted in designing and testing REST APIs for smooth data flow.
- Gained exposure to microservices architecture and basic backend integration patterns.

Date: April 2024

- Honors: Ramesh Khode Prize - Awarded for best academic score

- Languages: Java 21, SQL, Python
- Backend Development: Spring Boot, REST APIs, Microservices, Spring Security, JWT Authentication, Spring AI, LLM Orchestration
- Databases: PostgreSQL, MySQL
- Frontend Development: React.js, HTML, CSS (basic)
- Tools & Frameworks: Git, Maven, Gradle, Liquibase, Flyway, Postman, Swagger, Ollama
- Cloud & Platforms: AWS EC2
- Testing: JUnit5 and Mockito

Development Methodologies:

Agile

Java Developer Intern

Remote

MaldsAi Laboratory Pvt Ltd

Sept 2024 – Mar 2025

- Contributed to E-waste management product, starting with research and understanding the tech stack.
- Developed REST APIs for product catalog and inventory management using Java Spring Boot.
- Implemented database migration and versioning using Liquibase.
- Assisted with basic frontend tasks in React.js, gaining early full-stack exposure.
- Added pagination and JWT-based security to enhance functionality and safety.

PROJECTS

Bitly Like Url Shortner

- Developed a URL shortening service that converts long URLs into unique 6-character links.
- Implemented JWT-based authentication to secure API access.
- Implemented Redis caching, reducing URL redirection latency by 40%.
- Designed a scalable and secure backend, showcasing full-stack development skills.
- Wrote unit tests using JUnit and Mockito to ensure reliability.

Local LLM Integration (Spring AI & Ollama)

- Integrated Spring AI with Ollama to interact with the Llama 3.2 model locally for secure AI processing.
- Developed REST APIs in Spring Boot to process natural language queries and return responses to the browser.
- Managed local LLM orchestration to ensure data privacy and high-performance inference within the Java ecosystem.
- Designed a web-accessible endpoint allowing direct interaction with the LLM via URL parameters for real-time results.

Process Monitor Backend System

- Designed a configurable backend system to create and manage executable tasks using REST APIs.
- Implemented CRON-based scheduling to automatically execute processes at defined intervals.
- Integrated PostgreSQL with Flyway for version-controlled database migrations and execution logging.
- Ensured reliable backend performance with proper task management and monitoring.
